Gross Description:

1) The specimen is received fresh, labeled "Delphian lymph node" and consists of a single firm lymph node measuring 0.6 x 0.4 x 0.3 cm. The lymph node is entirely submitted.

Summary of sections:
LN - lymph node

2) The specimen is received fresh, labeled "total thyroidectomy and central compartment lymph nodes" and consists of a thyroid weighing 15.5 g. The right lobe measures 4.0 x 1.8 x 1.3 cm, the left lobe measures 4.6 x 2.4 x 1.8 cm and the isthmus measures 1.2 x 1.0 x 0.2 cm. The external surface is covered by a thin fibrous capsule. The posterior surface of the specimen is inked black, and the anterior is inked blue. Sectioning reveals three nodules in the left lobe. A 2.4 x 1.8 x 1.6 cm yellow tan partially calcified nodule-left lower lobe, a 1.1 x 0.9 x 0.7 cm tan red homogeneous nodule-left mid lobe, and a third red tan homogeneous nodule measuring 1.1 x 0.8 x 0.6 cm-left upper pole. A central portion of the largest nodule is submitted for . The left thyroid lobe is a sequentially from superior to inferior in its entirety. The remaining thyroid parenchyma is red tan and beefy. Representative sections of the specimen. Submitted for and a photograph has been taken. The remaining tissue is serially sectioned and submitted.

Summary of sections:
N - nodule
RL - right lobe
LL - left lobe
IS - isthmus
