Carcinoma, infiltrating duct, NOS 8500/3

Site Code: breast, NOS C50.9

12/21/10 *ku*

Final Diagnosis

Breast, right, wide local excision: Infiltrating ductal carcinoma, Nottingham grade III (of III), [tubules 3/3, nuclei 3/3, mitoses 3/3; Nottingham score 9/9], forming a 3.5 x 2.5 x 2.5 cm mass [AJCCpT2]. Angiolymphatic invasion is absent. The non-neoplastic breast parenchyma shows nonproliferative fibrocystic changes. All surgical resection margins are negative for tumor (minimum tumor free margin, 0.5 cm medial margin).

Lymph nodes, right axillary sentinel, excision: Multiple (6) right axillary sentinel lymph nodes with blue dye are negative for metastatic carcinoma (AJCCpN0(i-) (sn)]. Immunohistochemical cytokeratin stain was performed on the paraffin embedded sentinel lymph node tissue and confirms the H&E impression.

Lymph node, right axillary non-sentinel, excision: A single right axillary non-sentinel lymph node identified is negative for tumor.
