Accession number: [REDACTED]

Final Report

DIAGNOSIS:

1) HYPOPHARYNX, LEFT, EXCISION: DIFFUSELY INVOLVED BY INVASIVE MODERATELY TO POORLY DIFFERENTIATED PAPILLARY SQUAMOUS CELL CARCINOMA.

**Electronically Signed Out by [REDACTED]

CLINICAL DATA

Clinical Features: Left pharyngeal mass

Operator: Dr. [REDACTED]

Operation: Unspecified

Operative Findings: Unspecified

Operative Diagnosis: Unspecified

Tissue Submitted: 1)hypopharyngeal mass

GROSS DESCRIPTION:

1) SOURCE: Left Hypopharyngeal Mass

Received fresh are multiple fragments of unoriented tissue measuring 8.0 x 7.0 x 2.0 cm. The specimens range from white-tan and exophytic to brown-red portions of soft tissue. No obvious surgical resection margins or oriented planes of resection can be identified. Therefore, no portion of the specimen is inked. Representative sections of the specimens are submitted. Summary of sections: 1A, 1B, 2/1 each; 1C-1F, 1/1 each.
