## HISTOPATHOLOGY REPORT

### CLINICAL DETAILS

yo female with melanoma 1mm Clarke II TMR 1/mm<sup>2</sup> excised from left shoulder  
 14/10/10- large solid mass left axilla and FNA showed metastatic melanoma.  
 CT (staging)-> T2 LN in left axilla suspicious for melanoma. Having left axillary clearance.  
 B/g obesity, sleep apnoea, type 2DM, HTN. Specimen: left axillary contents.

Axillary U/S

### FROZEN SECTION REPORT

Fresh tissue was taken for tumour banking (Registrar/ Pathologist:

### MACROSCOPIC DESCRIPTION

(Dr

"LEFT AXILLARY CONTENTS". The specimen consists of fibrofatty muscular tissue.  
 The specimen measures 200 x 160 x 58mm. There is attached muscle measuring up to  
 75 x 53 x 25mm. There is one marked area which has been sampled for tumour banking.  
 This is the largest lymph node measuring 65 x 33 x 33mm. The cut surface appears pathological  
 with pale and brownish areas. Representative sections of this lesion embedded in blocks A - H.

- A-F. Largest lymph node (sampled for tumour banking).
- G. Two lymph nodes.
- H. Two lymph nodes.
- I. Two lymph nodes.
- K-L. One bisected lymph node.
- M. ?Two lymph nodes.
- N. ?Four lymph nodes.
- P. ?Four lymph nodes.
- Q. One lymph node.
- R. One lymph node.
- S. One bisected fatty lymph nodes.
- T. Two lymph nodes, fatty.

### MICROSCOPIC REPORT

"LEFT AXILLARY CONTENTS".

Metastatic melanoma is present in 1 of 20 lymph nodes. The metastasis (A-F) is about 65mm across replacing a lymph node. There is no definite extranodal extension. The tumour consists of epithelioid cells, many containing fine cytoplasmic pigment and there is extensive tumour necrosis. The remaining 19 lymph nodes show occasional pigment laden macrophages in sinusoids.

### SUMMARY

LEFT AXILLARY LYMPH NODE DISSECTION - METASTATIC MELANOMA IN 1 OF 20 NODES.
