Gross Description

The specimen labeled with the patient's name and as "Thyroid: Total thyroid stitch marks upper pole left lobe, fresh for tumor banking" consists of an oriented thyroidectomy specimen that weighs 15.5 g. The right lobe measures 3.6 cm SI x 2.7 cm ML x 1.3 cm AP, the left lobe measures 4.0 cm SI x 3.0 cm ML x 1.5 cm AP and the isthmus measures 2.0 cm SI x 2.1 cm ML x 0.5 cm AP. The external surfaces have fibrous adhesions and are painted with silver nitrate. No parathyroid glands or no lymph nodes are identified grossly. The lower left lobe contains a well delineated partly calcified nodule that measures 1.1 cm SI x 0.9 cm ML x 0.7 cm AP. The remainder of the thyroid tissue is grossly unremarkable. Sections of left lobe nodule and normal tissue are stored frozen. The remainder of the specimen is submitted as follows:

1A-F right lobe, superior to inferior
1G-H isthmus
1I-N left lobe, superior to inferior
