Microscopic pathology

The H&E stained slide at hand shows an epitheloid malignant tumor with sparse amount of connective tissue. The tumor constitute approx. 80 percent of the tissue. The tumor cells show round to oval nuclei with granular chromatine. There is a high nucleo/cytoplasmatic ratio. The mitotic count is 3 mitoses per square millimetre. The tumor cells have a middle sized pigmented cytoplasm. The tumor shows a nodular growth pattern. Lymphocytic infiltrates compound approx. 3 percent of the tissue cells. Melanophages are present.

Diagnosis: Parts of a malignat tumor, consistent with a metastasis of a melanoma.
