Collected [REDACTED]	SP FINAL REPORT Source: [REDACTED]		

## HISTORY:

Source of Specimen: Throat. History of left neck mass. Operative Procedure/Tissue Submitted: DL3, possible selective neck dissection.

## GROSS:

1. 'Left tonsillar fossa tissue.' Received fresh in a small container for frozen section are seven, tan, soft tissue fragments, ranging from 0.1 to 0.5 cm.
- 1A. Frozen section control. (7ns)
2. 'Deep left tonsillar fossa tissue.' Received fresh in a small container are numerous soft tan-pink tissue fragments, 1.3 x 1.3 x 0.5 cm in aggregate.
- 2A. Frozen section control. (ns)

## FROZEN SECTION REPORT

- 1&2. Positive for squamous cell carcinoma. [REDACTED]

I, [REDACTED] have reviewed and interpreted the frozen section material at the time it was requested.

Permanent sections confirm frozen section report.

## MICROSCOPIC DIAGNOSIS:

- 1&2. Left tonsillar fossa and deep left tonsillar fossa, biopsies: Poorly differentiated squamous cell carcinoma (depth of invasion at least 0.6 cm).

I, [REDACTED] the signing staff pathologist, have personally examined and interpreted the slides from this case.
