

ICA-0-3

Carcinoma, infiltrating duct, NOS 8500/3

Site Code: breast, NOS C50.9

12/21/10

### Final Diagnosis

Breast, left, wide local excision: Infiltrating ductal carcinoma, Nottingham grade II (of III) [tubules 3/3, nuclei 2/3, mitoses 2/3; Nottingham score 7/9], forming a mass (1.9 x 1.8 x 1.2 cm) [AJCC pT1c]. Ductal carcinoma in situ, intermediate nuclear grade, comprises approximately 5-25% of tumor volume (including the ductal carcinoma in situ, the tumor is 2.1 cm, in greatest dimension). Angiolymphatic invasion is absent. The non-neoplastic breast parenchyma shows proliferative fibrocystic changes. All surgical resection margins, including the separately submitted re-excision of the medial margin, are negative for tumor (minimum tumor free margin, 0.5 cm, deep and inferior margin).

Lymph nodes, left axillary sentinel, excision: Multiple (8) left axillary sentinel lymph nodes are negative for metastatic carcinoma [AJCC pN0 (i-) ( )]. Immunohistochemical cytokeratin stain was performed on the paraffin embedded sentinel lymph node tissue and confirms the H&E impression.
