MACROSCOPIC DESCRIPTION

(Dr

Two specimens were received.

1. "CALF ? MELANOMA LEFT POSTERIOR 6 O'CLOCK DEEP MARGIN". A small piece of none oriented cauterised fatty tissue 7 x 2 x 2mm. All embedded for frozen section ion block A.

2. "MELANOMA RECURRENT LEFT LEG MARKING STITCH SUPERIOR". An oval shaped piece of skin 45 x 40 x 25mm deep, with a dermal - subcutaneous light brown nodule 15 x 15 x 20mm. A superior marking suture is present, designated 12 o'clock. 3 o'clock half blue, 9 o'clock half black.
A - B, C - D. Two full face transverse sections.

A small portion of the tumour was taken for tumour banking at a fresh stage - (Dr

MICROSCOPIC REPORT

1. "Calf ? melanoma left posterior 6 o'clock deep margin":

Dense fibrous tissue and adipose tissue. No evidence of malignancy seen.

2. "Melanoma recurrent left leg marking stitch superior":

The sections show an undifferentiated non-pigmented epithelioid neoplasm involving the subcutis and adjacent dermis. It is 0.1mm from the deep inked margin of excision (2B) and <0.1mm from the nearest (blue ink 0 3 o'clock) lateral margin.

SUMMARY

Skin left posterior calf - recurrent amelanotic melanoma, close to margins.
