Sample

Gross Pathology

Cryofixated specimen with a weight of

Microscopic pathology

The H&E stained slide at hand shows an epitheloid malignant tumor with sparse amount of connective tissue. The tumor constitute approx. 90 percent of the tissue. The tumor cells show round to oval nuclei with granular chromatine.

There is a high nucleo/cytoplasmatic ratio. The mitotic count is 10 mitoses per square millimetre. The tumor cells have a middle sized pigmented cytoplasm.

The tumor shows a sheet like growth pattern.

Lymphocytic infiltrates compound approx. 5 percent of the tissue cells.

Melanophages are present.

Diagnosis: Parts of a malignant tumor, consistent with a metastasis of a melanoma.
