**Gross Description:**

1). The specimen is received in formalin, labeled "Total thyroidectomy", and consists of a thyroid weighing 13 g. The right lobe measures 3.5 x 2 x 1 cm, the left lobe measures 4 x 2 x 1.2 cm and the isthmus measures 1 x 1 x 0.3 cm. The external surface is covered by a thin fibrous capsule. The posterior surface of the specimen is inked black, and the anterior is inked blue. Sectioning reveals a nodule. The nodule is located in the left lobe lower pole, measures 2.1 x 1.5 x 1.5 cm, displays white cut surfaces, and is no encapsulated. Sections through the remaining tissue reveal unremarkable cut surfaces. The remaining thyroid parenchyma is red brown and beefy. A representative section of the specimen is submitted for TPS. The remaining tissue is serially sectioned and representatively submitted.

**Summary of sections:**

N - nodule, entirely submitted

RL - right lobe

LL - left lobe

IS - isthmus
