

DIAGNOSIS

A) ADDITIONAL SUPERIOR MARGIN, SOFT TISSUE:

Fibroadipose tissue, no melanoma identified.

B) RIGHT BACK, SKIN AND SUBCUTANEOUS TISSUE EXCISION:

MULTIFOCAL METASTATIC MELANOMA IN SUBCUTANEOUS TISSUE, TRANSECTED, FOCALLY ABUTTING THE
SUPERIOR SUBCUTANEOUS TISSUE MARGIN.

LARGEST TUMOR SIZE IS 25 X 16 MM.

C) ADDITIONAL INFERIOR DEEP MARGIN.

Skeletal muscle and fibroconnective tissue, no melanoma identified.

ICD-O-3
Melanoma NOS 8720/3
Site: Soft tissue, back C47.6

GROSS DESCRIPTION

(A) ADDITIONAL SUPERIOR MARGIN, STITCH AT TRUE MARGIN - A 4.5 x 2.5 x 2.0 cm yellow-tan fibrofatty tissue fragment. The true margin is indicated by the suture and is inked blue. The en face margin is submitted in A1 and A2, and representative section is submitted in A3.

Per TSS - Metastatic - PRIMARY WAS SKIN of calf. BCR.

(B) SPECIMEN RE-EXCISION METASTATIC MELANOMA RIGHT BACK - A 6.0 x 2.3 cm light-tan skin ellipse excised to the depth of 7.0 cm (9.5 x 7.0 x 2.0 cm yellow-tan fibrofatty subcutaneous tissue). The skin surface is unremarkable except for a 0.5 cm area of nodularity towards the lateral aspect 2.0 cm from the tip and 1.1 cm from the superior and inferior margins. No pigmented lesions are identified on the skin surface. The specimen is serially sectioned to reveal a large 2.5 x 1.6 x 1.4 cm circumscribed, lobulated dark brown nodule involving the dermis and superficial subcutaneous tissue is less than 1.0 mm from the superior inked margin and 4.0 mm from the inferior inked margin and 70.0 mm from the deep margin. Multiple satellite nodules measuring 5.0 to 8.0 mm in greatest dimension are present at the periphery of the main tumor nodule with the deepest nodule 30.0 mm from the deep resection margin.

Please note the majority of the tumor is submitted for

INK CODE: Blue – Superior half; Yellow – Inferior half.

SECTION CODE: B1, lateral tip; B2, medial tip; B3-B4, largest nodule with superior and inferior margins; B5, en face deep margin; B6, deepest satellite nodule in the skeletal muscle; B7-B8, satellite nodules close to the largest nodule; B9, representative section of skin with tumor; B10, representative sections of normal skin on lateral and medial aspects of the tumor.

(C) ADDITIONAL INFERIOR DEEP MARGIN, STITCH TRUE MARGIN - A 1.8 x 1.0 x 0.7 cm red-tan skeletal muscle tissue fragment. Suture indicates true margin, which is inked blue and serially sectioned perpendicular to the margin and entirely submitted in C.

CLINICAL HISTORY

Melanoma, right back.
