DIAGNOSIS :

SUPPLEMENTAL REPORT

COMMENT: The invasive squamous carcinoma in specimen C (hemiglossectomy, maxillectomy, mandibulectomy, partial pharyngectomy and neck dissection) infiltrates the mandibular bone, however, the mandibular bone resection margins are negative for tumor.

Fragments of bone designated with attached soft tissue, negative for tumor.

DIAGNOSIS

(A) BUCCAL MUCOSA, RIGHT, EXCISION:

FRAGMENTS OF WELL DIFFERENTIATED SQUAMOUS CARCINOMA.
Invasion cannot be evaluated in this material.

(B) NODULE, SUBMENTAL, EXCISION:

Fragments of lymphoid tissue, negative for tumor.

(C) HEMIGLОСSECTОМY, MAXILLEСTOMY, MANDIBULECTOMY, PARTIAL PHARYNGECTOMY AND NECK DISSECTION:

INVASIVE SQUAMOUS CARCINOMA, MODERATELY DIFFERENTIATED,
INVOLVING BUCCAL MUCOSA, GINGIVA, PHARYNX AND TONGUE.
(SEE COMMENT)

TUMOR EXTENDS TO LATERAL SOFT TISSUE RESECTION MARGIN.
Anterior, medial, posterior and deep resection margins
are negative for tumor.

Perineural invasion is present.

Submandibular gland with chronic inflammatory cell
infiltrate, negative for tumor.

Thirty-one left neck dissection lymph nodes, negative
for tumor (4 submental, 1 subdigastric, 4 midjugular,
5 lower jugular, 1 upper posterior cervical, 4 midposterior
cervical, and 12 lower posterior cervical).

Mandibular bone is being decalcified and a supplemental report
will follow.

(D) UVULA, REMNANT, EXCISION:

Squamous mucosa and salivary gland tissue, negative for
tumor.

COMMENT

The squamous carcinoma in specimen C measures 5.5 x 3.0 x 3.0 cm.
The tumor has grossly a 2.5 cm depth of invasion.

SPECIMEN

- (A) BUCCAL MUCOSA, RIGHT, EXCISION:
- (B) NODULE, SUBMENTAL, EXCISION:
- (C) HEMIGLOSSECTOMY, MAXILLECTOMY, MANDIBULECTOMY, PARTIAL PHARYNGECTOMY AND
- (D) UVULA, REMNANT, EXCISION:
