### PATHOLOGIC DIAGNOSIS

CERVIX, BIOPSY:

- INVASIVE SQUAMOUS CELL CARCINOMA, POORLY DIFFERENTIATED

Staff Pathologist

Pertinent Clinical Information  
SCCA of cervix.

Clinical Impression: Cancer.

**Gross Description**

Specimen Material: Cervical biopsy.

The case is received in one part labeled with the patient's name, medical record number and given accession number and it is accompanied by a requisition form labeled with the same name and same accession number.

The specimen is received in formalin labeled "CERVICAL BIOPSY" and consists of a 0.7 x 0.5 x 0.3 cm and 0.9 x 0.3 x 0.2 cm tan-white soft irregular tissue, which is submitted in toto in one cassette.

**Pathology Resident**

**Microscopic Description**

Sections of the biopsy show scant amounts of fibrous stroma infiltrated by sheets and nests of poorly differentiated malignant cells with pleomorphic, hyperchromatic nuclei and a moderate amount of cytoplasm. The tumor cells are highlighted by a CK5/6 immunohistochemical stain with appropriate control. These findings are consistent with a poorly differentiated invasive squamous carcinoma.

Intradepartmental consultation: has examined this case and agrees with the findings and interpretation.

These findings were discussed with

The staff pathologist listed below has reviewed this case.

This immunohistochemistry test(s) was developed and its performance characteristics determined by the and/or affiliated institution. It has not been cleared or approved by the U.S. Food and Drug Administration. The FDA has determined that such clearance or approval is not necessary. This test is used for clinical purposes. It should not be regarded as investigational or for research. This laboratory is certified under the Clinical Laboratory Improvement Amendments of 1988 (CLIA) as qualified to perform high complexity clinical laboratory testing.
