

[REDACTED]

**Main diagnosis/diagnoses:**

Peripheral bronchopulmonary, histologically mucinous adenocarcinoma with very predominant bronchioloalveolar differentiation and spread and a small component showing destructive, infiltrative growth and localization in S10.

TNM classification on the basis of this material pT2 pN0 pMX R0 stage IB.

C34.3 M 8255/3.

**Comment/supplementary remark:**

There is no evidence of the carcinoma having infiltrated the visceral pleura. The resection margin of the bronchus and vessels and all the removed lymph nodes are also tumor-free.
