Microscopic pathology

The H&E stained slide at hand shows an epitheloid malignant tumor with sparse amount of connective tissue. The tumor constitute approx. 80 percent of the tissue. The tumor cells show round to oval nuclei with granular chromatin. Eosinophilic nucleoli are present. There is a high nucleo/cytoplasmatic ratio. The mitotic count is 4 mitoses per square millimetre. The tumor cells have a middle sized pigmented cytoplasm. The tumor shows a sheet like growth pattern. The tumor harbours approx. 20percent of necrotic tissue.

Diagnosis: Parts of a malignant tumor, consistent with a metastasis of a melanoma.
