

## Surgical Pathology Report

Patient Name: [REDACTED]  
Med. Rec. #: [REDACTED]  
DOB: [REDACTED]  
Gender: F  
Physician(s): [REDACTED]  
cc: [REDACTED]

Client: [REDACTED]  
Location: [REDACTED]

Accession #: [REDACTED]  
Taken:  
Received:  
Reported:

History/Clinical Dx: Right adnexal mass

ICD-O-3 not applicable.

Postoperative Dx: (Not Provided)

Normal path from non-cancer patient.

pw 11/11

### Specimen(s) Received:

A: Left adnexa  
B: Uterus, cervix, right ovary and tube, left parametrium

### DIAGNOSIS:

- A. Left adnexa: Endometriosis with surface adhesions, left tube and ovary
- B. Uterus, cervix, right tube and ovary:

Cervix:	Chronic inflammation
Endometrium:	Proliferative phase
Myometrium:	Leiomyoma, intramural
Right ovary:	Cystic follicles
Right tube:	Unremarkable

### Intraoperative Consultation:

- A. Frozen Section Interpretation: Benign

### Gross Description

- A. Received fresh labeled "left adnexa" is a previously opened single piece of soft tan to pink tissue, 38 grams, 9.0 x 7.0 x 1.0 cm. There is a tube, which measures 3.0 x 0.6 cm. The inner lining is smooth, and measures up to 0.7 cm in greatest thickness. There are areas of clotted blood within the cystic structure. Representative sections are submitted in six cassettes after frozen section, with cassette A1 as frozen section.
- B. Received: In formalin are two pieces of soft tan to white tissue  
Labeled: Left parametrium, right ovary, right fallopian tube, cervix, uterus  
Weight: 85 grams  
Size:  
Uterus: 8.6 x 6.7 x 4.2 cm  
Right ovary: 2.4 x 2.2 x 1.6 cm

#### Regulatory Statement:

The following statement may be applicable to some of the reagents/instruments used in preparing the above report. This note does not apply to all instruments or chemicals used in this report.  
The following statement may be applicable to some of the reagents/instruments used in preparing the above report. This note does not apply to all instruments or chemicals used in this report.  
This laboratory is certified under the Clinical Laboratory Improvement Act of 1988 (CLIA) as permitted to perform high complexity clinical laboratory testing.

## Surgical Pathology Report

### **Appearance**

Serosal surface:

Cervix:

Endometrium:

Myometrium:

Right tube and ovary:

Other:

Smooth, with jagged areas, subserosal bulging present  
White, smooth, shiny, with no lesions grossly identified  
0.2 cm in thickness, tan, smooth with areas of mucoid material and clotted blood. There is a thickened area of endometrium on the posterior wall of the uterus, measuring up to  $2.2 \times 0.8 \times 0.1$  cm, 4.0 cm from the cervical margin. The surface is smooth, tan to white and firm, and does not appear to extend into the myometrium  
1.0 cm in thickness. Possible area of adenomyosis,  $1.5 \times 0.9 \times 0.4$  cm  
Right tubes measures  $4.9 \times 0.4 \times 0.4$  cm, and shows evidence of tubal ligation. The ovary contains cystic structures, largest up to  $0.9 \times 0.9 \times 0.6$  cm, filled with clear serous fluid.  
There is one apparent myoma, up to  $1.6 \times 1.5 \times 1.2$  cm.

### **KEY TO CASSETTES:**

- |     |   |  |
|-----|---|--|
| 1   | - | Cervix   |
| 2   | - | Lower uterine segment, full thickness                                |
| 3-5 | - | Endo/myometrium, full thickness with previously described tan nodule |
| 6   | - | Endo/myometrium  |
| 7   | - | Possible area of adenomyosis   |
| 8   | - | Right adnexa   |

### **Microscopic Description**

A&B. The microscopic findings support the above diagnoses.
