Tissue Source:  
 1: CERVIX #1 FOR FS  
 2: CERVIX #2  
 3: VAGINA: NORMAL  
 4: CERVIX

### Final Diagnosis:

#### 1. Cervix, #1 (biopsy):

- Squamous cell carcinoma, invasive, moderately differentiated margins involved (see note).

Note: Although the orientation of the biopsy is not optimal, the tumor near completely replaces the entire cervical stroma and measures greater than 5 mm in greatest thickness.

#### 2. Cervix, #2 (biopsy):

- Fragments of invasive squamous cell carcinoma, moderate to poorly differentiated.

#### 3. Vaginal mucosa for study, normal (biopsy):

- Mucosal tissue (gross diagnosis only).

Note: The specimen was submitted in its entirety for the protocol study.

#### 4. Cervix (biopsy):

- Squamous cell carcinoma, invasive, moderate to poorly differentiated.

## Histology

\* Final Report \*

### Labelled "cervix #1, biopsy" (FS x 1, TP x 2):

- Invasive squamous cell carcinoma.

#### Gross Description:

**Part 1.** Received fresh for frozen section and subsequently placed in formalin is a 1.0 x 0.7 x 0.2 cm portion of red-pink tissue that is entirely submitted for frozen section and two H&E touch preps are made. The specimen is forwarded for routine histological processing in its entirety.

1 – frozen section remnant tissue. 1 piece.

**Part 2.** Labelled "cervix #2 tumor". Received fresh and subsequently placed in formalin is a 1.4 x 0.6 x 0.3 cm portion of tan-grey, granular, friable tissue. A portion of the specimen is submitted for the study and the remainder is trisected and forwarded for routine histological processing.

1 – 3 pieces, x 3.

**Part 3.** Received fresh and subsequently placed in formalin is a 0.3 x 0.2 x 0.2 cm portion of vaginal mucosa which is entirely submitted for study. No tissue is submitted for histological processing.

**Part 4.** Labelled "cervix". Received in formalin is a 1.7 x 0.6 x 0.4 cm fragment of grey-pink, markedly friable, granular tissue with no ectocervical mucosa or possible resection margin grossly identified. The specimen is entirely submitted for routine histological processing.

1 – 1 piece.

Note: tissue may fragment upon processing.
