Gross Description:

1). The specimen is received fresh, labeled "Total thyroidectomy" and consists of a thyroid weighing 28 grams. The right lobe measures 4.5 x 3.5 x 3 cm , the left lobe measures 4.0 x 2.3 x 1.2 cm and the isthmus measures 2.2 x 2.0 x 0.7 cm. The external surface is covered by a thin fibrous capsule. The posterior surface of the specimen is inked black, and the anterior is inked blue. Sectioning reveals, in the right lobe, a well-circumscribed, soft, markedly hemorrhagic, gelatinous brown-tan nodule measuring 2.9 x 2.6 x 2.5 cm. It abuts the capsular surface but does not grossly involve or extend through it. Sections through the remaining tissue reveals, in the left lobe, a well-circumscribed, firm, brown-tan nodule measuring 1.0 x 0.7 x 0.6 cm. It abuts the capsular surface but does not grossly involve or extend through it.. The remaining thyroid parenchyma is red tan and meaty. Representative sections of the specimen are submitted for TPS. The remaining tissue is serially sectioned and entirely submitted from left to right.

Summary of sections:

RL-serial section of right lobe, bisected

RL - right lobe

LL - left lobe

I - isthmus
