CLINICAL NOTES

Imm melanoma (R) hand ->

Now palp (R) axilla mass

SPECIMEN INFORMATION

(R) axillary dissection.

MACROSCOPIC DESCRIPTION

"Right axillary contents". An irregularly shaped piece of fatty tissue, 190 x 150 x 120mm, including some attached skeletal muscle, 80 x 70 x 25mm. The specimen was examined for lymph nodes working from the end with the skeletal muscle. Sectioning reveals a well-demarcated firm, pale grey nodule, 60 x 40 x 30mm, which extends to 4mm from the nearest margin. The nodule has extensive areas of necrosis and haemorrhage centrally. In addition there is a second nodule with a firm, white cut surface up to 25mm across and well clear of the surgical margins.

- A. Representative slice from largest nodule.
- B. Second nodule.
- C. 1 node in 3 pieces.
- D. 1 node in 2 pieces.
- E. 3 nodes.
- F. 4 nodes.
- G. 2 nodes.
- H. 1 node in 2 pieces.
- J&K. Each 4 nodes.
- L. 3 nodes.

MICROSCOPIC REPORT

"Right axillary contents". Sections show metastatic malignant melanoma involving 10 out of 26 lymph nodes. One of the involved nodes show extranodal tumour extension.
